

Polar Communications has been working on redesigning our mail system. Some changes that customers need to be aware of with these changes are the following:

- 1) Webmail - You must use webmail.polarcomm.com or webmail.domain.com to access your account. The previous address of mail.polarcomm.com will no longer work.
- 2) Mail Settings - The outgoing mail server is smtp.polarcomm.com, the incoming mail server is pop.polarcomm.com. Hosted domains should use smtp.domain for outgoing mail server and pop.domain for the incoming mail server.

If you have any questions our help desk is available 24/7/365, they can be reached at 1.888.700.7652.

Thank you for your patience as we work to improve your services.
