MANAGED
FIREWALL

Firewall management is an organization's primary network defense. It demands more time from network security managers than virtually any other activity and requires extensive experience to manage effectively. Our managed firewall service delivers around-the-clock security event and device health monitoring, management of upgrades, changes and patching, policy auditing, and intelligence-enhanced threat protection to help keep your environment safe.

purchase options

Depending on your needs, Polar will determine the right SonicWall for you. We will provide a quote with purchase price and monitoring and management options.

Customer is responsible for license fees and renewals with the purchase option. Not available in all areas. Contact us for details. This institution is an equal opportunity provider and employer.
